

SHOURYA GURJAR

Ahmedabad, India | +91 6353834479 | shouryagurjar86@gmail.com

Detail-oriented Computer Science student specialising in **Cyber Security and Forensics** with hands-on experience in web development, IoT-based security systems, and mobile threat analysis. Skilled in applying DBMS, network security, and full-stack development to build robust and secure solutions.

EDUCATION

MIT World Peace University <i>Bachelor of Technology, Computer Science and Engineering (Cyber Security and Forensics)</i> Aug 2024 – Present	Pune
Shanti Asiatic School (CBSE) <i>Senior Secondary, XII, Percentage- 80.8%</i> Mar 2023 – Apr 2024	Ahmedabad

SKILLS

Programming Languages – Python, SQL, C, C++, HTML, CSS, JavaScript
Tools & Technologies – React, FastAPI, MySQL, ADB (Android Debug Bridge), ESP8266/Arduino, Git, Scapy, VirusTotal API, Firebase
Domains – Cyber Security, Network Traffic Analysis, IoT Security, Web Development, Database Management
Soft Skills – Communication, Teamwork, Adaptability, Problem Solving, Critical Thinking

EXPERIENCE

Website Developer IRIS Club, MIT World Peace University, Pune Part of the website development team of the college club IRIS-MITWPU - Used React, HTML, CSS, and JavaScript to develop and maintain the club website. - Added a chatbot to reply to user queries faster and more efficiently. - Redesigned the website for better user experience and modern aesthetic. - GitHub: github.com/kushagra-a-singh/I.R.I.S-Prod-Website	Apr 2025 – Sep 2025
Cyber Security Analyst (Remote) Tata Consultancy Services – Forage - Completed a job simulation involving Identity and Access Management (IAM) in collaboration with a Cybersecurity Consulting team. - Acquired expertise in IAM principles, cybersecurity best practices, and strategic alignment with business objectives. - Delivered comprehensive documentation and presentations showcasing the ability to communicate complex technical concepts effectively.	2024

PROJECTS

PulseScan – Mobile Device Security Scanner <i>Course: Project Based Learning II Guide: Dr. Dipali Baviskar MIT-WPU</i> - Built a web-based Android security scanner connecting to devices via ADB, performing quick and deep security scans to detect suspicious apps and harmful files. - Quick scan matches package names against suspicious keywords; deep scan checks file extensions and names; integrated VirusTotal API for MD5/SHA256 hash-based reputation analysis. - Automated PDF report generation and email delivery via SMTP; built with Python, FastAPI, ADB, and a web interface in HTML, CSS, and JavaScript.
Sentinal – Network Traffic Anomaly Detection System <i>Course: Database Management System Laboratory Guide: Dr. Sukhada Bhingarkar MIT-WPU</i> - Designed a DBMS-driven network monitoring system using FastAPI, MySQL, and Scapy to capture live traffic, detect anomalies, and manage alerts through a web dashboard. - Implemented role-based access control (Admin, Analyst, Operator) with DCL privileges; applied stored procedures, triggers, and 3NF normalisation across all tables. - Dashboard features live traffic monitoring, detection rules configuration, alert workflow management, and log cleanup for a mini-SOC style environment.

IoT-Based Unauthorized Device Detection and Alert System

Course: Embedded Systems and Internet of Things | Guide: Dr. Vinod Kumar | MIT-WPU

- Built a low-cost intrusion detection system using **ESP8266 NodeMCU and Arduino Uno** to detect unauthorised devices on a Wi-Fi network via MAC address whitelisting.
- ESP8266 handles **network scanning and whitelist comparison**; Arduino controls **real-time LED and buzzer alerts** on detection of unknown devices.
- Demonstrates how simple IoT components can be combined to build an **effective network security solution** without complex infrastructure.
